1. Course Description

Course Code:	OGPO200
Course Title:	Oil and Gas Production Operator Level 2
Hours:	120
Calendar Description:	Level II provides you with a solid background in working with equipment that you will encounter every day on the job as a production operator. You will learn concepts and skills that will help you operate, maintain and understand the many types of oil and gas production equipment. The emphasis is on operating principles and maintenance/troubleshooting procedures for production equipment such as line heaters, separators, valves, actuators, pumps, compressors, heat exchangers and more.

Oil and Gas Production Operator

Overview

Did you know that Oil and Gas Production Operators are in high demand in the oil and gas industry? Get your career in the oil and gas industry off to a running start, and play a key role in keeping the industry running!

The Oil and Gas Production Operator (OGPO) program is designed to train professional and technically knowledgeable individuals for the oil and gas industry.

The program provides personalized learning modules. As you progress through the four levels in the program, you will expand your knowledge and practical skills, developing an academic background that will be relevant to your future employment.

The program provides a solid overview of varied workings of the oil and gas industry, as well as practical skills and knowledge relating to practical topics such as workplace safety, production equipment, refining, gas processing, instrumentation and measurement. Refer to the course descriptions for more topics and details.

This program is updated regularly to reflect current industry practices and requirements. The program promotes individual success and academic achievement.

Career Opportunities

OGPO graduates can look forward to a career that is both challenging and rewarding! Employment opportunities are numerous, in various production and operational positions within Alberta's wide-ranging oil and gas industry, including work in gas plants, oil refineries, battery operations and as field operators.
